

MICRO-AID®

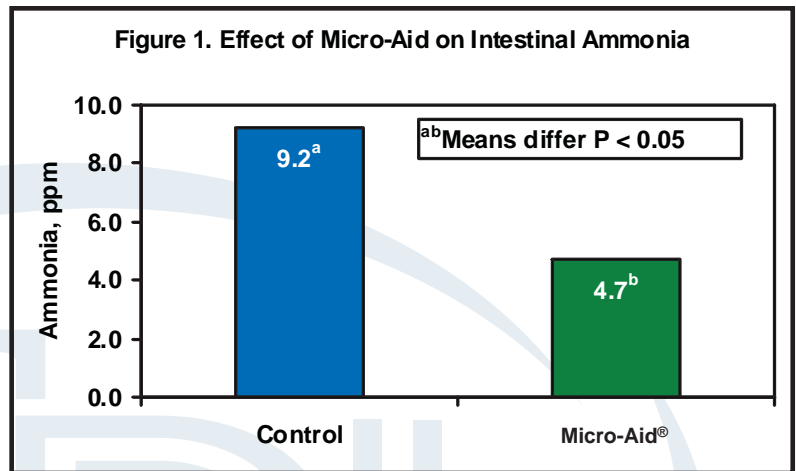

Micro-Aid® in all feed, all the time

Summary of Micro-Aid® Usage on Animal Performance

Micro-Aid®

Micro-Aid® is an all-natural, environmentally safe additive proven to be extremely effective in controlling noxious gases (e.g., ammonia, sulfides, phenols, etc.). The environmental benefits of Micro-Aid® start with promotion of a healthier gastrointestinal tract environment. Research has consistently demonstrated that Micro-Aid® significantly reduces intestinal ammonia (Figure 1). By reducing intestinal ammonia, Micro-Aid® maintains gut health, improves the efficiency of nutrient utilization, and enhances animal performance.

The following figures demonstrate the extensive database that has been developed through research with Micro-Aid® and the consistent performance benefits that are reported by its use. The consistent improvements in weight gain and feed efficiency demonstrated in this research database prove the ability of Micro-Aid® to benefit performance in all animal species. In addition to the results shown here, an extensive database has been developed demonstrating the environmental attributes of Micro-Aid® including a reduction in noxious, odor-causing gases such as ammonia, sulfides and phenols, improved pit and lagoon management and a reduction in solids and waste viscosity. Performance and health improvements have also been reported in lactating dairy cows, dairy re-breeding performance, sow and litter performance, layers, turkeys, rabbits, horses and pets.

Summary

Micro-Aid® has stood the test of both university and commercial evaluation as it is as effective in today's commercial livestock industry as it was when it was first introduced over forty years ago. Micro-Aid® is one of the most tested and cost effective feed additives available for livestock production today. Great performance, consistency, and reasonable cost ensure a higher return on investment for Micro-Aid® than most other feed additives in the marketplace. Using Micro-Aid® in all feed, all the time provides the piece of mind that you are optimizing productivity while at the same time providing a safe and healthy environment for your livestock, yourself, and your neighbors.
